Email, WhatsApp aur SMS jodne ke liye kya chahiye

Help Desk se customers ko Email, WhatsApp aur SMS pe reply bhejne ke liye kaunse accounts banane hain, unse kya-kya details leni hain, aur kya decide karna hai. Step by step, Hinglish mein.

Section	Kya hai
1. Ek nazar mein	Teeno channels: kitna kaam, kitna time, kisko karna hai
2. Email	Gmail ya Brevo: kya chahiye
3. WhatsApp	Meta direct ya partner company: kya chahiye
4. SMS	MSG91 (India) ya Twilio (bahar): kya chahiye
5. Details kaise deni hain	Passwords aur keys safely kaise dein
6. Decide karna hai	Aapke faisle aur aage kya banega

Abhi ka haal: replies customer ke store wale request page pe chat mein jaate hain. Email ka code ready hai (sirf mailbox login chahiye). WhatsApp aur SMS ka code account milne ke baad banega. Tab tak yeh options app mein chhupe hue hain.

Bana: 23 October 2026

1. Ek nazar mein

Channel	Aapko kya karna hai	Kitna time	Kharcha (lagbhag)	Uske baad developer
Email	Gmail App Password banana, ya Brevo account	10-30 minute	Gmail: free (Workspace ka plan) · Brevo: free 300/din	Server pe daal ke test: ~1 ghanta
WhatsApp	Meta Business verification, naya number, message template approve karwana	2-7 din (verification)	Har message/conversation ka Meta charge, partner ho toh mahine ki fees	Integration banana: 2-3 din
SMS	MSG91 + DLT registration (India), ya Twilio (bahar)	DLT: 2-7 din · Twilio: same din	Har SMS ka charge, Twilio number ka mahine ka charge	Integration banana: 1-2 din

Sabse pehle Email karo
Iska code pehle se bana hua hai. Sirf mailbox ka login chahiye, aur usi din chalu ho jaayega. Customers ko ticket ka confirmation, aapke replies aur status updates email pe milne lagenge.

Kharche ke baare mein
Upar ke kharche andaaze hain. Har company ki pricing page pe aaj ka rate dekh lena: Meta (WhatsApp Business pricing), MSG91, Twilio, Brevo.

Reply kaise jaayega (sab jud jaane ke baad)

Channel	Customer ko kya milega	Customer jawab de toh
Request page (abhi chal raha)	Store ke private page pe chat mein reply	Usi page se, seedha ticket mein
Email	Reply inbox mein, request page ke link ke saath	Request page ke link se
WhatsApp	Reply WhatsApp pe	WhatsApp pe jawab seedha ticket mein (yeh banaya jaayega)
SMS	Chhota message + request page ka link	Request page ke link se

2. Email

Do mein se koi ek chuno. Dono mein email aapke apne address se jaata hai, jaise `support@zioncases.com`.

Option A: Gmail / Google Workspace

Agar support email Google pe hai.

1. Us Google account mein login karo jisse email bhejna hai.
2. **Google Account** → **Security** → **2-Step Verification** on karo.
3. Wahin **App passwords** kholo → naam likho "Zion Help Desk" → **Create**.
4. 16 letters ka password dikhega. Use copy karke safe rakho.

> **Limit**
> Gmail se din ke lagbhag 500 emails (Workspace mein 2,000). Normal password nahi chalega, sirf App Password.

Option B: Brevo

Free plan: 300 emails/din. Emails spam mein jaane ke chances kam.

1. brevo.com pe free account banao.
2. **Senders, Domains & Dedicated IPs** mein support email add karke verify karo.
3. Domain zioncases.com authenticate karo: Brevo jo DNS records (DKIM, DMARC) bataye, unhe domain ke DNS mein daalo.
4. **SMTP & API** → **SMTP** tab se **SMTP login** aur ek naya **SMTP key** banao.

Developer ko yeh dena hai

Cheez	Gmail	Brevo
SMTP host	`smtp.gmail.com`	`smtp-relay.brevo.com`
Port	`587`	`587`
User	Poora email address	Brevo ka SMTP login
Password	16 letters ka App Password	SMTP key
From address	Wahi email	Brevo mein verified sender email
Team alerts kis email pe	Naye ticket aur customer reply ki khabar kis email pe chahiye (Help Desk Settings mein bhi daal sakte ho)	

> **Uske baad**
> Developer yeh server pe daal ke app restart karega aur Settings se test email bhejega. Phir reply box mein **Send via** → **Email** apne aap dikhne lagega.

3. WhatsApp

WhatsApp ke 2 zaroori rule

(1) Customer ko pehla message, ya 24 ghante ki chuppi ke baad ka message, sirf Meta se **approve hue template** se ja sakta hai. (2) Customer ne pichhle 24 ghante mein message kiya ho, tabhi aap normal text reply bhej sakte ho. Isliye ek template chahiye jaise: "Hi {{1}}, we've replied to your request #{{2}}. Tap to view: {{3}}".

Option A: Meta WhatsApp Cloud API (direct)

Sabse sasta, sirf Meta ka per-message charge. Setup thoda lamba.

1. **business.facebook.com** pe Meta Business account banao, aur **Business verification** karo (GST / company documents).
2. Ek **naya phone number** lo jo kisi WhatsApp ya WhatsApp Business app pe active na ho.
3. **developers.facebook.com** → Create App → **Business** → WhatsApp product add karo → number jodo.
4. **Business Settings** → **System users** → ek system user banao → permanent token banao, permission `whatsapp_business_messaging` aur `whatsapp_business_management` ke saath.
5. **WhatsApp Manager** → **Message templates** mein upar jaisa template banao aur approve karwao (category: Utility).
6. Payment method add karo (Meta per conversation/message charge karta hai).

Option B: Partner (Interakt / AiSensy / Twilio)

Setup aasaan, unki team madad karti hai. Mahine ki fees + message charge.

1. Partner ki site pe account banao aur unka WhatsApp onboarding pura karo (woh Meta verification aur number mein madad karte hain).
2. Unke dashboard mein template banao aur approve karwao.
3. Unke dashboard se **API key** lo.

> **Agar pehle se koi partner use ho raha hai**
> Toh wahi le lo. Developer usi ke hisaab se integration banayega.

Developer ko yeh dena hai

Cheez	Meta direct	Partner
Phone Number ID	developers.facebook.com → WhatsApp → API Setup	Partner ki API key + account ID
WhatsApp Business Account ID	Usi page pe	
Permanent access token	System user ka token (step 4)	

App Secret	Meta app → Settings → Basic (customer ke jawab safely lene ke liye)	Partner ka webhook secret
Approved template ka naam aur language	Jaise `request_reply_update`, English	
Business ka WhatsApp number	Jo customers ko dikhega	

Developer kya karega

Webhook (callback) URL dega jo Meta/partner ke dashboard mein daalna hai, taaki customer ke WhatsApp jawab seedha ticket mein aayein. Reply box mein WhatsApp option chalu hoga, aur har message ka status dikhega: bheja gaya, pahuncha, padha, fail.

4. SMS

SMS chhota hota hai, isliye isme reply ka chhota hissa aur request page ka link jaata hai. Customer jawab request page se deta hai.

India ke customers: MSG91

1. **DLT registration** (sarkari rule, zaroori): Jio / Airtel / Vi / BSNL ke kisi DLT portal pe company register karo (PAN, GST, letter of authorisation).
2. DLT pe **Sender ID / Header** approve karwao (6 letters, jaise `ZIONCS`).
3. DLT pe **SMS template** approve karwao, jaise: "Hi {#var#}, we replied to your request #{#var#}. View: {#var#} - Zion Cases".
4. **msg91.com** pe account banao, DLT details jodo, credit daalo.
5. MSG91 → API se **Auth Key** lo, aur template ka **Template ID** note karo.

Bahar ke customers: Twilio

1. **twilio.com** pe account banao aur verify karo.
2. Ek phone number kharido jo SMS bhej sake (US/UK jaisa).
3. Console se **Account SID** aur **Auth Token** lo.
4. US numbers ke liye A2P 10DLC registration lagta hai (Twilio console batata hai).

Developer ko yeh dena hai

MSG91	Twilio
Auth Key	Account SID
Sender ID (DLT approved)	Auth Token
Template ID (DLT approved)	Twilio phone number
DLT Entity ID (MSG91 maang sakta hai)	Kaunse countries mein SMS jaana hai

Phone number zaroori

SMS aur WhatsApp tabhi jaa sakte hain jab customer ne form mein phone number diya ho, country code ke saath. Zaroorat ho toh form mein phone ko zaroori banaya ja sakta hai.

5. Details kaise deni hain (safety)

> **Passwords aur keys WhatsApp, email ya chat mein mat bhejo**
> Jiske paas key hogi, woh aapke account se messages bhej sakta hai aur kharcha karwa sakta hai.

1. **Sabse sahi:** developer Help Desk mein **Settings** → **Channels** page banayega. Aap khud wahan key paste karke **Connect** dabaoge. Key turant check hogi aur sirf server pe safe rahegi; browser ko kabhi wapas nahi bheji jaati.
2. **Email ke liye abhi:** server ki `.env` file mein khud daal sakte ho (developer steps dega), ya password manager (Bitwarden / 1Password) ke share link se do.
3. Kaam hone ke baad koi key leak hone ka shak ho, toh provider ke dashboard se naya key bana ke purana band (revoke) kar do.

6. Decide karna hai

- [ ] **Email:** Gmail / Google Workspace ya Brevo? Kaunse address se email jaaye?
- [ ] **WhatsApp:** Meta direct ya partner (Interakt / AiSensy / Twilio)? Pehle se koi WhatsApp Business account hai? Kaunsa number use hoga?
- [ ] **SMS:** customers zyada India ke hain (MSG91) ya bahar ke (Twilio), ya dono?
- [ ] **Customer ke jawab:** WhatsApp pe customer jawab de toh woh seedha usi ticket mein aaye? (Recommended: haan.)
- [ ] **Phone number:** form mein phone zaroori karna hai?

Aage kya banega

Kab	Kya
Email login milte hi	Server pe setup, test email, reply box mein **Send via** → **Email**.
WhatsApp account ready hone pe	Settings → Channels, WhatsApp se reply (template + 24 ghante wala rule), customer ke WhatsApp jawab ticket mein, message status.
SMS account ready hone pe	SMS se chhota reply + request page ka link, delivery status.

Tab tak WhatsApp aur SMS ke options app mein chhupe rahenge, taaki team confuse na ho. Replies request page pe chalte rahenge.
