Help Desk aur AI Photo Check: Poori Guide

Yeh system kaise kaam karta hai, store pe kaise set karna hai, roz tickets kaise sambhalne hain, aur server pe deploy ya wapas (rollback) kaise karna hai. Sab kuch step by step, Hinglish mein.

1. Ek nazar mein: kya bana hai
2. Pehli baar setup (har store pe)
3. Customer ka safar: form aur request page
4. Roz ka kaam: inbox aur ticket
5. AI Photo Check
6. Emails kaise jaate hain
7. Security aur limits
8. Technical: server, deploy, rollback
9. Problem aaye toh kya karein
10. Jaldi yaad rakhne wali baatein

Version: app release `zion-app-77` · code commit `0d47b81` · deploy: 22 October 2026
Stores: `netgains10.myshopify.com` aur `custom-collection-cases.myshopify.com` (dono ek hi app aur ek hi server se chalte hain)

1. Ek nazar mein: kya bana hai

Zion App ke andar ab ek poora support system hai, jaise Gorgias, Zendesk ya Richpanel jaise bade apps mein hota hai. Customer storefront se sawal poochta hai ya request bhejta hai, woh ek **ticket** ban jaata hai, aur aapki team Shopify admin ke andar se hi reply karti hai.

Hissa	Kya karta hai	Kahan milega
Help Desk form	Storefront ka form: order query, return/refund, shipping, wholesale, affiliate. Photos upload ho sakti hain.	Theme ka block "Help Desk form"
Request page	Har customer ka private page jahan woh status dekhta hai, aapka reply padhta hai aur photos ke saath jawab deta hai.	Link email mein aur form submit ke baad
Help Desk inbox	Saare tickets, views, filters, bulk actions, response time ki ginti.	Apps → Zion App → Help Desk
AI Photo Check	Customer ki har photo check hoti hai: AI se bani hai, kisi aur ticket se copy hai, ya edit ki gayi hai.	Har photo ke neeche badge
Settings	Email notifications, signature, team ke naam, saved replies, AI photo check.	Help Desk → **Settings** button

Poora system ek line mein

Customer form se sawal → **Ticket bana** #1001, #1002... number ke saath → **Customer ko email** ticket number + private link → **Aapki team** admin mein reply, note, status → **Customer** email/request page pe reply dekhta hai

> **Ek app, do store**
> Dono stores (netgains10 aur custom-collection-cases) ek hi "Zion App" aur ek hi server use karte hain. Jo badlav server pe jaata hai woh dono pe ek saath lagta hai. Har store ka data (tickets, settings) alag-alag rehta hai, ek store ka data doosre ko kabhi nahi dikhta.

Ticket ke status ka matlab

Status	Matlab
Open	Naya ticket, ya customer ne naya jawab bheja hai. Aapki team ki baari hai.
In progress	Team kaam kar rahi hai (jaise replacement bhej rahe hain).
Waiting on customer	Aapne reply kar diya, ab customer ka jawab chahiye. Reply bhejte hi status apne aap yahi ho jaata hai. **Sirf isi status pe customer ko request page pe "Add a message" box milta hai.** Customer jawab de toh ticket wapas **Open**.
Resolved	Kaam ho gaya. Request page pe likha aata hai "This request is closed", customer ko nayi request bhejni hogi.

Priority: Low, Normal, High, Urgent. **Assignee:** team ka koi member (naam Settings mein daalte hain). **Tags:** jaise "damaged", "vip", comma laga ke.

2. Pehli baar setup (har store pe)

Yeh kaam **har store pe alag** karna hai, kyunki theme aur settings har store ki apni hoti hain.

1. **Help Desk form page pe lagao.** Online Store → Themes → Customize → apna Contact/Support page kholo → Add section/block → **Help Desk form** → Save. Block settings mein Wholesale aur Affiliate signup page ke URL daal do.
2. **Team aur signature.** Help Desk → **Settings** → **Team members** mein naam (jaise "Priya, Rahul") aur **Reply signature** daalo → Save.
3. **Saved replies dekh lo.** Settings ke neeche 5 saved replies pehle se hain. Apne hisaab se badlo ya naye jodo.
4. **AI Photo Check: detector key zaroor daalo.** Settings → **AI photo check** → AI detector chuno (Sightengine ya TruthScan) → apni API key daalo → **Save AI photo check**. Key save karte waqt provider se verify hoti hai. Bina key ke sirf free checks (layer 1-4) chalte hain, aur jo photo woh decide nahi kar paate woh "Can't confirm" reh jaati hai.
5. **Emails (server pe, ek baar).** Customer aur team ko email bhejne ke liye server ki `.env` mein SMTP settings chahiye. Abhi yeh **set nahi hain**, isliye emails nahi jaate. Section 6 dekho.
6. **Test karo.** Storefront pe photo ke saath form bhejo. Admin mein ticket bina refresh kiye aa jaana chahiye, aur photo pe AI check ka badge.

3. Customer ka safar: form aur request page

Form bhejna

1. Customer topic chunta hai (Order Queries sabse upar). **Login customer** ka naam, email, phone apne aap bhar jaata hai, aur **order number poochha nahi jaata**: uske orders ki list aati hai (naye se purane, purane orders bhi), sabse naya order pehle se chuna hota hai, aur order chunte hi uske products dikh jaate hain. Topic ke hisaab se sahi orders upar aate hain (Update order pe jo ship nahi hue, Return/Issue pe jo ship ho chuke); aisa koi na ho toh saare orders dikhte hain. "My order isn't listed" chun ke number khud bhi likh sakta hai.
2. **Login nahi hai** toh order number likhna padta hai, aur wahin "Sign in" ka link aata hai.
3. Topic ke hisaab se fields aati hain: order number, issue, product chunna, photos (5 tak, 10 MB har ek, JPG/PNG/WebP).
4. Submit karte hi screen pe dikhta hai: "*Your request #1007 has been received*" aur **View your request** ka link.
5. Customer ko confirmation email jaata hai (jab SMTP set ho) jismein ticket number aur private link hota hai.

Request page (customer ka private page)

Link aisa hota hai: `https://store-domain/apps/help-desk?ticket=...`. Yeh page store ki apni theme ke andar khulta hai (header/footer same), aur mobile pe bhi theek dikhta hai.

- **Progress tracker:** Received → Team is on it → Your reply → Resolved. Abhi ka step laal ring se highlight hota hai.
- **Upar ka box** batata hai abhi kya ho raha hai (jaise "We've replied: your turn").
- **Conversation** chat jaisi dikhti hai: customer ke messages right side (dark), team ke left side "Support team" tag ke saath. Time customer ke apne time zone mein dikhta hai.
- **Right side** (mobile pe neeche): "Your request" mein form ki saari details aur "Good to know".
- Upar status dikhta hai, jaise "We've replied and are waiting for your response".
- Customer ki original request aur poori conversation (aapke replies, uske jawab).
- **Add a message** box **sirf tab khulta hai jab aapki team ne reply kiya ho** (status "Waiting on customer"). Tab customer text aur 3 tak photos ke saath jawab de sakta hai. Jawab aate hi ticket **Open** ho jaata hai, team ko email jaata hai, aur box tab tak band ho jaata hai jab tak team phir se reply na kare.
- Status **Open** ya **In progress** pe customer ko dikhta hai: "Our team will reply soon". **Resolved** pe: "This request is closed", nayi request bhejo.
- Internal notes aur activity log customer ko **kabhi nahi** dikhte.

Link kho gaya?

Customer `/apps/help-desk?ticket=` kholke **request number + email** daal ke apni request dhoondh sakta hai. 5 galat koshish ke baad 15 minute ka lock lagta hai, taaki koi doosron ki request guess na kar sake.

Signed-in customer

Jo customer login hai, use form ke upar **"Your requests"** list dikhti hai: uske saare tickets, status ke saath, ek click pe khulte hain.

4. Roz ka kaam: inbox aur ticket

Inbox (Apps → Zion App → Help Desk)

- **Upar ke numbers:** Needs attention (kitne kaam baaki), High priority, average first response time (30 din), Resolved (7 din).
- **Views:** Needs attention · Unassigned · High priority · Waiting on customer · Resolved · **Flagged photos** (jinki photo AI/reused nikli) · All tickets.
- **Search:** #number, naam, email, order number ya tag se.
- **Filters:** topic, priority, assignee, **Created** (Today / 7 / 30 / 90 din), sort (Last activity / Newest / Oldest).
- **Row mein:** New matlab abhi tak kisi ne nahi khola · AI photo / Reused photo matlab photo pe shak hai · laal "No reply yet · 5h" matlab abhi tak pehla jawab nahi gaya.
- **Bulk:** checkbox se kai tickets chuno → status, priority ya assignee ek saath badlo, ya **Delete**.

Ticket kholne pe

1. **Conversation padho.** Customer ki request, photos, replies, notes aur activity log ek hi timeline mein. Pichhli visit ke baad aaye customer messages pe New.
2. **Reply likho.** "Reply to customer" chuno. **Insert a saved reply** se ready jawab daalo: `{{ customer.first_name }}`, `{{ order.number }}` jaise placeholders apne aap bhar jaate hain. **Reply as** mein apna naam chuno.
3. **Bhejo. Send reply** (status apne aap "Waiting on customer") ya **Send and resolve**.
4. **Internal note** sirf team ke liye (peela box), customer ko kabhi nahi dikhta.
5. **Right side:** Status, Priority, Assignee, Tags badlo. Customer ki details, uske recent Shopify orders (payment/fulfillment ke saath), uske purane tickets, aur saare emails ka status.

Ticket delete karna

Teen tarike: (1) list mein har ticket ki row ke aakhir mein laal 🗑 button, (2) ticket kholke right side mein **Delete ticket** section, (3) list mein checkbox se kai tickets chun ke **Delete**. Ek confirm box aata hai: **Delete permanently** dabane pe ticket, uski poori conversation, notes, photos, photo checks aur emails hamesha ke liye hat jaate hain, aur customer ka request page link band ho jaata hai. Wapas nahi aata, isliye spam ya test tickets ke liye hi use karo; normal kaam ke liye **Resolved** karo.

> **Naye messages bina refresh ke (chat jaisa)**
> Inbox aur khula ticket har ~4 second mein check karte hain ki kuch naya aaya ya nahi. Customer ka naya ticket, naya message ya photo check ka result aate hi screen apne aap update ho jaati hai, aur ticket khula ho toh "New message from the customer" ka popup aata hai. Tab pe wapas aate hi turant check hota hai. Jo reply aap type kar rahe ho woh mitta nahi, aur inbox mein tickets select kiye hon toh update tab tak rukta hai.

Kaun sa status kab

Situation	Kya karein

Customer se aur info/photo chahiye	Reply bhejo, status khud "Waiting on customer" ho jaayega
Replacement/refund process ho raha hai	Status "In progress" (customer ko update email jaata hai, agar on hai)
Kaam ho gaya	"Send and resolve" ya status "Resolved"
Bahut zaroori (VIP, galat order bada)	Priority "Urgent" aur kisi ko assign karo

5. AI Photo Check

Return/refund ke liye customer jo photo bhejta hai, woh apne aap background mein check hoti hai. Isse customer ko koi deri nahi hoti. 5 layers mein check hota hai, sabse pakke (aur free) saboot se shuru. Pehli 4 layers kuch pakka paa lein toh wahin faisla; kuch na milein toh **layer 5, AI detector** aapki apni Sightengine/TruthScan key se chalta hai:

Check	Kya dekhta hai	Kharcha
1. Content Credentials (C2PA)	OpenAI, Adobe Firefly, Google jaise tools photo ke andar "AI se bani hai" likh dete hain.	Free
2. Watermark / signature	Stable Diffusion/ComfyUI ki settings, C2PA mein declared invisible watermark, aur Gemini ka chamakta star (✦) kone mein. Yeh WhatsApp forward ke baad bhi pakda jaata hai. (SynthID jaisa pixel watermark offline check nahi ho sakta; use layer 5 pakadta hai.)	Free
3. Metadata (EXIF)	AI tool ka naam, "ChatGPT Image..." jaisa file name, gpt-image jaisa pixel size, camera ki details.	Free
4. Hash / known image	Photo ka SHA-256 aur perceptual hash: yahi photo (ya thoda badla hua version) pehle kisi aur ticket mein aayi thi? Pehle AI nikli photo ki copy ho toh woh bhi AI.	Free
Saath mein: editing ke nishaan	Photoshop/Canva, camera preview match nahi karta, screenshot ya app export.	Free
5. AI detector (aakhri layer)	Sightengine ya TruthScan ka trained model: "AI 94% · Real 6%" jaisa result. Har us photo pe chalta hai jiska faisla layer 1-4 na kar paayein.	Aapki key

Badge ka matlab

Badge	Matlab aur kya karein
Likely AI-generated	Pakka saboot mila (credentials, watermark, AI tool ka naam) ya detector 70%+ bola. Customer se asli photo/video maango.
Reused photo	Yahi photo pehle kisi aur ticket pe aayi thi. Panel mein us ticket ka link hai, dono dekho.
Can't confirm	Na pakka asli, na pakka AI (metadata hata hua, detector key nahi, ya score beech mein). Zaroorat ho toh aur photo maango.
Likely genuine	Camera ki asli details theek hain, ya detector ne kam score diya.
Couldn't check / Scan incomplete	**Re-scan** dabao.

Photo pe click karo → **Photo check** panel: verdict, confidence %, har check ne kya paaya, camera details, aur buttons **Re-scan** / **Check with AI detector**.

Detector kab chale (Settings → AI photo check)

- **Every photo the free checks can't settle** (recommended, default): layer 1-4 faisla na karein toh har photo detector ko jaati hai.
- **Skip clear camera originals:** checks bachata hai; jinki camera details poori aur sahi hain, woh detector ko nahi jaatin.
- **Only when I click:** kabhi apne aap nahi, sirf button dabane pe.

Ek hi photo pe dobara paisa nahi lagta (purana result reuse hota hai). Key save karte waqt provider se verify hoti hai. Jo photos bina key ke scan hui thi, unhe key daalte hi detector apne aap dobara check karta hai.

> **Yeh saboot hai, faisla nahi**
>
> WhatsApp jaise apps photo ka metadata hata dete hain, isliye metadata na hona customer ke khilaaf nahi gina jaata. Badge ko ishaara samjho: shak ho toh customer se aur photo ya video maango, seedha mana mat karo.

6. Emails kaise jaate hain

Email	Kisko	Kab
New ticket alert	Aapki team	Naya ticket
Confirmation (#number + link)	Customer	Ticket bante hi (Settings mein on/off)
Reply	Customer	Aap "Send reply" dabao (signature ke saath)
Status update	Customer	Aap status "In progress" ya "Resolved" karo (on/off)
Customer replied alert	Aapki team	Customer request page se jawab de

Queue aur retry

Har email pehle database mein save hota hai, phir bheja jaata hai. Fail ho jaaye toh 1 minute, phir 5 minute baad dobara try. 3 baar fail hone pe "Email failed" dikhta hai aur ticket pe **Retry** button aata hai. Ticket ke right side mein **Emails** section mein har email ka status dikhta hai.

Abhi emails band hain

Server pe SMTP settings nahi hain, isliye abhi koi email nahi jaata. Tickets aur request page phir bhi poori tarah chalte hain, customer reply request page pe dekh sakta hai. Emails chalu karne ke liye server ki `/var/www/zion-app/.env` mein yeh daalo, phir app restart karo (Section 8):

```
SMTP_HOST=smtp.gmail.com        # ya aapka mail server
SMTP_PORT=587                   # 465 ho toh SSL apne aap
SMTP_USER=support@yourstore.com
SMTP_PASS=app-password-yahan
SMTP_FROM=support@yourstore.com # optional
```

Gmail ho toh normal password nahi, **App Password** lagega. Settings mein **Send test email** se check karo.

7. Security aur limits

- **Har store ka data alag:** server Shopify ke signed request se store pehchanta hai. Koi URL badal ke doosre store ka data nahi dekh sakta.
- **Request page ka link secret hai:** 48 character ka random token. Isliye customer ko link share na karne ko kaho.
- **Internal notes** aur activity log customer ko kabhi nahi bheje jaate.
- **Spam se bachav:** chhupa "honeypot" field, aur har visitor ki limit:

Kaam	Limit (har visitor)
Naya ticket	5 per minute
Reply bhejna	10 per minute
Galat request lookup	5 galti → 15 minute lock

- **Photos:** sirf asli JPG/PNG/WebP, 10 MB tak har ek. Naam badal ke koi aur file upload nahi ho sakti, andar ke bytes check hote hain.
- **Privacy (GDPR) webhooks:** customer Shopify se apna data delete karwaye toh uske saare tickets apne aap delete ho jaate hain. Store app hataye toh 48 ghante baad Shopify ke kehne pe us store ka saara Help Desk data saaf ho jaata hai.
- **AI detector keys** sirf server pe rehti hain, browser ko kabhi nahi bheji jaatin. (Abhi database mein bina encryption ke save hoti hain.)

Limits server ki memory mein hain: server restart pe reset ho jaati hain. Abhi ek hi server hai, toh yeh theek hai.

8. Technical: server, deploy, rollback

Cheez	Detail
App URL	`https://zion.netgains.org`
Server	`2.25.226.33` (Ubuntu, nginx), login `root` (SSH key se)
App folder	`/var/www/zion-app`
Process	`pm2` naam `zion-app`, port 3000
Database	SQLite: `/var/www/zion-app/prisma/dev.sqlite`
Code	GitHub `GITNetgains/Free-Gift-Cart`, branch `main`
Shopify app	"Zion App", org Netgains. Extensions `shopify app deploy` se jaate hain

> **Auto deploy nahi hota**
> GitHub pe push karne se server apne aap update **nahi** hota. Neeche wale steps chalane padte hain.

Naya version deploy karna

A. Apne computer pe (project folder mein):

```
pnpm test                      # sab tests pass hone chahiye
git push origin main           # code GitHub pe
npx shopify app deploy --allow-updates --message "kya badla"   # theme widget/blocks
```

B. Server pe (`ssh root@2.25.226.33`):

```
TS=$(date +%Y%m%d-%H%M%S); mkdir -p /root/backups
cp -a /var/www/zion-app/prisma/dev.sqlite /root/backups/zion-app-dev-$TS.sqlite   # DB backup
cd /var/www/zion-app
git fetch origin && git reset --hard origin/main
CI=true pnpm install --frozen-lockfile
npx prisma migrate deploy      # database badlav
npx prisma generate            # Prisma client naye schema se (zaroori!)
rm -rf build.prev && cp -a build build.prev   # purana build sambhal ke
pnpm run build
pm2 restart zion-app --update-env
pm2 logs zion-app --lines 30 --nostream       # error toh nahi?
```

Gadbad ho toh wapas (rollback)

```
cd /var/www/zion-app
rm -rf build && cp -a build.prev build       # purana build wapas
pm2 restart zion-app
# database bhi wapas chahiye toh (pehle app band karo):
pm2 stop zion-app
cp /root/backups/zion-app-dev-<TIMESTAMP>.sqlite prisma/dev.sqlite
pm2 start zion-app
```

22 October ke deploy se pehle ka poora backup: `/root/backups/zion-app-20261022-101638.tgz` (code), `zion-app-dev-20261022-101638.sqlite` (database), `zion-app-env-20261022-101638` (.env). Shopify extension ka purana version Partners dashboard → App → Versions se dobara release ho sakta hai.

Code kahan hai

File / folder	Kaam
`app/routes/app.help-desk.tsx`	Admin: inbox, ticket, settings
`app/routes/app.help-desk-pulse.tsx`	Admin ka live update check (har ~4 second)
`app/routes/webhooks.compliance.tsx`	Privacy webhooks: customer/store data delete
`app/routes/help-desk.tsx`	Storefront: form, request page, lookup (app proxy `/apps/help-desk`)
`app/services/help-desk*.ts`	Tickets, emails ki queue, orders
`app/services/image-scan/`	AI Photo Check ki saari layers
`extensions/free-gift-popup/`	Theme: Help Desk form block
`prisma/schema.prisma`, `prisma/migrations/`	Database tables
`tests/`	130+ automatic tests

9. Problem aaye toh kya karein

Problem	Kya check karein
Form "could not load" bol raha hai	Block setting "App proxy path" `/apps/help-desk` hai? Server chal raha hai? (`pm2 status`)
Koi email nahi ja raha	Server pe SMTP settings hain? (Section 8.) Ticket ke right side "Emails" mein status aur error dekho.
"Email failed"	Error message padho (galat password, limit). Theek karke **Retry** dabao.
Har photo "Can't confirm" aa rahi hai	AI detector key nahi daali. Settings → AI photo check mein Sightengine ya TruthScan key daalo; pichhli photos apne aap dobara check ho jaayengi.
Photo pe "Checking photo" atka hai	10 minute baad apne aap "Scan incomplete" ho jaata hai, phir **Re-scan**.
AI detector error ("rejected your credentials", "checks used up")	Settings → AI photo check mein key dobara daalo, ya provider ke dashboard mein plan/credits dekho.
Customer bol raha hai "reply ka box nahi hai"	Yeh rule hai: box sirf "Waiting on customer" status pe khulta hai. Customer ko kuch bhejna hai toh pehle aap reply karo (status khud badal jaayega).
Customer ko apni request nahi mil rahi	Use `/apps/help-desk?ticket=` pe number + email se dhoondhne ko kaho, ya admin se ticket ka "Customer's request page" link bhejo.
Admin mein naya feature nahi dikh raha	Server pe deploy hua? (Section 8 ke steps.) Browser hard refresh (Ctrl+Shift+R).
Server error	`pm2 logs zion-app --lines 100 --nostream` dekho. Zaroorat ho toh rollback (Section 8).

10. Jaldi yaad rakhne wali baatein

Roz

- Inbox ka **Needs attention** view khaali karo.
- Laal "No reply yet" wale tickets pehle.
- AI photo / Reused photo wale tickets dhyan se dekho.
- Reply ke liye saved replies use karo.

Har hafte

- Average first response time dekho.

Kabhi mat bhoolo

- Internal note customer ko nahi dikhta, reply dikhta hai. Bhejne se pehle tab dekh lo.
- Photo badge saboot hai, faisla nahi.
- Server pe deploy se pehle database backup.
- Dono stores ek hi server pe hain: server ka badlav dono pe lagta hai.

Abhi baaki

- Dono stores pe AI detector key (Sightengine ya TruthScan).
- Server pe SMTP settings (emails ke liye).
